

A valuable tool for monitoring your animals' daily water consumption

OMNI-Water automatically collects water usage data from any of OMNI-4000's water monitoring devices and provides tools for monitoring and analyzing water usage and flow rates at your site.

Changes from normal water consumption patterns can be an early indication of costly changes in your animals' health. When combined with OMNI-Feed, OMNI-Water can be a valuable tool for early diagnosis of potential health problems and aid in feed management strategies. In addition, when combined with OMNI-Manure, you can monitor total site water usage and its effects on manure handling costs.

Whether you want to monitor water usage or flow in each room, each building, or the entire site, you can configure the versatile OMNI-Water system to your individual needs. This makes OMNI-Water a valuable tool for cost reduction strategies and production optimization.

**Features**

- ◆ Automatic data collection
- ◆ Information at a glance
- ◆ Printable charts and reports
- ◆ Flexible monitoring options
- ◆ Customizable charts and reports
  - ◆ **Water Usage Chart**—displays *daily* water usage for a single water usage group (water meter/pulse counter), over the selected date range.
  - ◆ **Water Flow Chart**—displays water flow rates single water flow group (up to five water meters/pulse counters), over the selected date range.
  - ◆ **Water Usage Report**—displays *daily and total* water usage for single or multiple groups, over the selected date range.
  - ◆ **Water Flow Report**—displays the water flow rates for the selected pulse counters. You can select up to five pulse counters from a single water flow group.
  - ◆ **Water Monitor Configuration Report**—displays the configuration and settings for all OMNI Water Monitors at the site.

**Other requirements and information**

- ◆ OMNI-4000 software
- ◆ OMNI Water Monitor, OMNI Power Block, or Local Environment Monitor
- ◆ Water meter(s) with pulse output
